

eTravel Gateway

Developer Interface

A Travel Technology Systems Ltd. Product

Until now...

if you wanted to offer availability and booking via your web site or back office system...

... you needed a large investment in network infrastructure and EDI messaging systems.

“The eTravel Gateway Developer Interface provides software developers with API access to Global Distribution Systems via the Internet at a fraction of the costs of a dedicated system.”

Why use the eTravel Gateway Developer Interface?

- GDS integration for web sites, back office systems and desktop booking tools
- real time transactions
- programming interfaces (API) for XML, C, C++, Visual Basic, COM, Java, PERL
- platforms supported: Windows (XP, 2000, 98, NT), most UNIX (eg, HP, SCO, AIX) and LINUX.
- full documentation and examples
- no need for specialised equipment
- development assistance and resources are available - please call for a quote!

The eTravel Gateway Developer Interface has revolutionised all that!

Using our advanced and proven technology, Travel Agents, tour operators and systems suppliers can now link their systems into Galileo's **EDIFACT Select** structured data interface across an existing Internet connection. The eTravel Gateway allows fast, efficient and reliable access to the full range of functionality available on **EDIFACT Select**..... at a fraction of the cost of dedicated leased-line solutions!

eTravel Gateway can get your development team connected to the Galileo development system in a matter of minutes...

The eTravel Gateway developer system facilitates full end to end testing before your system goes live – giving you full confidence in your systems and allowing you to continue to enhance, develop and test your systems without any disruption to your business.
